

SMALL DRAGGER RUNNING FOR HARBOR

"Sock" shaped net is towed behind the boat at walking speed, dragging on the bottom

Hoist line on pulley at masthead, for hauling the "cod end" (toe of the sock) up on deck

Forestays (permanent wires) to stabilize the mast against the hoist line

Outriggers (pulled in for travel) extend the tow lines outboard to help spread the net.

Power Capstan, one on each side, for pulling in tow lines and the net

"Doors" or paravanes, "fly" down and outward through the water to spread the net
